Problem Statement ID: SIH26034

Problem Statement Title: Software System to check compliance of Packaged Commodities under Legal Metrology(Packaged Commodities) Rules, 2011 by scanning products, images and labels.

Project / Solution Title: LabelTruth — AI-Powered Legal Metrology & Packaging Compliance Detector

Theme: Agriculture, FoodTech & Rural Development | Category: Software

Ministry / Dept: Department of Consumer Affairs (DoCA), Ministry of Consumer Affairs, Food & Public Distribution

Team ID: [Your Team ID] | Team Name: [Your Team Name Registered on Portal]

PROPOSED SOLUTION (Idea / Prototype)

1. Detailed Explanation of Proposed Solution

- LabelTruth is an AI-powered compliance platform automating packaged commodity audits under Legal Metrology (Packaged Commodities) Rules, 2011 (LMPC Rules) and Legal Metrology Act, 2009 for Enforcement Officers (DoCA) and Consumers.
- Dual-Pack Multimodal Vision AI (Gemini 2.5 Flash): Simultaneously extracts front/back text, Principal Display Panel (PDP) dimensions, barcodes, and mandatory declarations with zero manual entry.
- Deterministic Rule Engine: Validates Rule 6(1)(a)-(h) [Mfg Details, Generic Commodity Name, Net Qty, Unit Sale Price (USP), MRP, Packing Date, Consumer Care] and Rules 7-9 [PDP Font Sizing].

2. How it Addresses the Problem

- Eliminates Manual Bottlenecks: Replaces 15-minute physical audits with < 3-second automated verification across physical retail & e-commerce.
- Zero-Tolerance Defect Detection: Detects missing USP, non-compliant font heights, and deceptive branding (e.g. Maida masked as Atta).
- Evidence Dossiers: Automatically generates court-admissible digital dockets with cropped photo proofs, timestamps, and violation codes.

3. Innovation and Uniqueness of the Solution

- Image-First Vision AI: Audits any unlisted or newly launched physical product directly without needing pre-existing barcode databases (unlike TruthIn).
- Interactive Regulatory AI Chatbot (/chat/product): Real-time conversational legal assistant for officers & citizens to query statutory thresholds.
- Automated Legal Notice Generator: 1-click generation of digitally stamped PDF violation notices under Sec 18 & 36 of Legal Metrology Act, 2009.

TECHNICAL APPROACH

1. End-to-End 4-Stage Architectural Pipeline

[1. Ingestion] Dual-Camera Snap / E-Commerce Image URL / Barcode Scan

- [2. Multimodal AI Extraction] Gemini 2.5 Flash Vision isolations of PDP area, OCR text & structured JSON declarations.
- [3. Deterministic Compliance Engine] Mathematical verification of LMPC Rules 2011 (Rule 6, 7-9), USP formulas, and FSSAI rules.
- [4. Enforcement & Reporting] 100-Point Truth Score dashboard, ReportLab Statutory PDF Notices, and Interactive AI Chat.

2. Technology Stack & Frameworks

- Mobile & Web Frontend: Flutter (Dart) with Riverpod, CameraX, and Text-to-Speech (TTS) for high-performance cross-platform execution.
- Backend API: FastAPI (Python 3.10) with asynchronous non-blocking routes (<100ms response time) and Pydantic v2 data validation.
- Database & Cloud: PostgreSQL (Render Cloud) with SQLAlchemy ORM for encrypted inspection logs, evidence photos, and audit histories.

3. Key Engineering Methodologies

- Zero-Hallucination Separation: Multimodal AI is strictly used for text extraction; all legal evaluations are 100% computed mathematically.
- Hybrid Decoupled Scanning: Operates via Dual-Camera packaging OCR or Open Food Facts live barcode registry with automatic fallback.

FEASIBILITY AND VIABILITY

1. Feasibility Analysis

- Technical Feasibility: Fully functional working prototype deployed and tested (Flutter + FastAPI + PostgreSQL + Gemini 2.5 Flash). Delivers >95% OCR accuracy and <3s audit response on real Indian retail products.
- Operational Feasibility: Zero learning curve for field officers; runs seamlessly on standard smartphones without costly dedicated hardware.
- Legal & Financial Viability: Strictly aligned with Legal Metrology Act, 2009 & LMPC Rules, 2011. Negligible operational cost (< ₹0.15/scan).

2. Potential Challenges, Risks & Mitigation Strategies

- Challenge 1: Packaging Glare, Crinkling & Curved Surfaces —► Strategy: Live camera bounding boxes, auto-flash assist & multi-angle sharpness guidance.
- Challenge 2: Multilingual Packaging Across Indian States —► Strategy: Gemini multimodal vision inherently parses 12+ Indian languages (Hindi, Tamil, Marathi, etc.).
- Challenge 3: AI Hallucinations in Legal Notices —► Strategy: Deterministic rule engine strictly separates perceptual text from statutory logic.
- Challenge 4: Low Connectivity in Rural Markets —► Strategy: Offline-first local SQLite cache queues inspections and auto-syncs when online.

IMPACT AND BENEFITS

1. Multi-Stakeholder Impact

- Department of Consumer Affairs (DoCA) & Enforcement Officers: 10x faster market surveillance, automated evidence collection, and digital court dockets.
- 1.4 Billion Indian Consumers: Complete price transparency (accurate MRP & Unit Sale Price), elimination of deceptive packaging, and 1-click NCH reporting.
- FMCG Manufacturers & Retailers: Pre-market digital label verification prevents crores in packaging recall losses and regulatory penalties.

2. Core Value Dimensions (Social, Economic, Environmental)

- Governance & Legal: Standardizes automated enforcement under Sections 18 & 36 of Legal Metrology Act, 2009 with zero subjective human bias.
- Economic & Fair Trade: Eliminates dual-MRP and hidden price inflation by enforcing transparent Unit Sale Pricing (USP per g/ml).
- Social & Inclusivity: Text-to-Speech (TTS) voice readout empowers rural, elderly, and visually impaired citizens to verify packaging integrity.
- Environmental Sustainability: Pre-market label verification prevents millions of non-compliant printed plastic/paper packages from being scrapped.
